

Led Zeppelin - The Rover *Amp and FX Settings*

All FX and amps are placed in the exact same order below. I used a Line 6 POD HD500X to create this tone along with a strat with hot humbuckers installed in it. You will need to adjust these settings to match your guitar's sound.

- Noise Gate: Decay 21% - Threshold 14%
- MXR Dyna Comp: Sustain 70% - Level 75%
- Amp: '71 Park® 75 Bright Input Channel
- Phaser: MXR Phase 90
